Please note project date changes (again), as well as previously unavailable information on K-Series skin painting study. K-Series inhalation study is back to starting on April 16- we need PTL data, confirmation that the cigarettes are on their way, and signed testing request. Thanks for your help.

Dear All:

After several discussions all stakeholders agreed on the following:

- K Series inhalation: Study will start on April 16, 2003. To accommodate this date we need urgently: confirmation that the cigarettes are already on its way (AWB no.), PTL data, and formal testing request. The delivery of the report will be on January 16, 2004.
- SCoR inhalation: The running study will be reported as scheduled, i.e., December 31, 2003.
- Mouse skin painting, EHC 3 mg and 6 mg: The study will start on April 2, 2003 (arrival of mice), first condensate application will be on April 21, 2003, QA-checked tables (without histology) will be available on December 31, 2003. Report delivery (including histopathology) will be on March 31, 2004.

I hope this fits to your plans.

Best regards,  
Ewald
